HR Team Performance Dashboard

Project problem statement, data terminology, KPI definitions and analytical scope

1. Problem statement

HR teams need a consistent view of employee status, departures, transfers, workforce composition and joining trends. Scattered employee-level records make it difficult to compare workforce movements across departments, grades and reporting managers. This Excel dashboard consolidates the supplied HR records into a repeatable view for exploratory workforce reporting and quality checks.

2. Project objectives

Summarize employee statuses; compare joining cohorts and departments; describe employment type, gender and grade distribution; review manager-level employee counts; and identify data quality issues that affect workforce interpretation.

3. Workbook inventory and scope

The macro-enabled workbook has Dashboard, Calculations and Data worksheets. Data has 171 employee rows and 16 fields; Calculations contains pivot-style summaries. Joining-year values span 2020–2025. The source institution, reporting snapshot date and permission to publish employee data are not documented.

4. Headline measures

171 distinct employee IDs; 118 On-Board (69.01%); 47 Attrition (27.49%); 6 Transfer (3.51%). Employment type: 148 Permanent and 23 Contract. Category values: 107 Male and 64 Female. These are status shares in the supplied extract, not annual attrition or retention rates.

5. Data dictionary and terminology

Field	Meaning / caution
Emp Status	Recorded status: On-Board, Attrition or Transfer; snapshot interpretation requires a reporting date.
Movement	Employee movement label (e.g., IJP, OnRoll); 146 blank values; source definitions not provided.
Emp Id	Employee identifier; 171 unique values. Remove from public sample data.
Name	Employee name; personal data, not suitable for public sharing.
Date of Joining	Recorded employment start date; Excel date field.
Data of Relieving	Column name as provided; likely departure date. Verify definition and inconsistent records.
Reporting Manager	Manager name; personal information requiring protection.
Emp Type	Employment type, Permanent or Contract.
Category	Contains Male/Female values; functions as a gender field in this dataset.
Date of Birth	Birth date; sensitive personal information; verify anomalous dates.

Marital status	Recorded marital status; personal information; not essential to public dashboard.
Grade	Employee grade: Trainees, Professional, Management or Contract.
Department	Organizational department, e.g., Operations, HR or Sales.
Total Experience	Numeric experience measure; units and calculation basis not stated.
Year	Joining-year grouping in workbook.
Stability	Categorical labels from 1+ years to 5+ years; calculation methodology not documented.

6. KPI definitions

Total employee records = count of nonblank Emp Id; On-board employees = count where Emp Status is On-Board; Attrition records = count where status is Attrition; Transfers = count where status is Transfer; Status share = status count / 171 × 100; Department headcount = count of records by Department, optionally filtered by status. Annual attrition rate cannot be computed reliably without period-average headcount and confirmed event timing.

7. Suggested analysis questions

Which departments have the most on-board employees? How do joining-year cohorts vary? What are the employment-type and grade distributions? How are status counts distributed across managers? Do transfers and departures cluster in particular groups?

8. Data quality, assumptions and limitations

There are no duplicate employee IDs. Movement is blank for 146 records; Data of Relieving is blank for 125 records. Category is labelled generically but contains gender values. Date of Birth values require validation because some appear implausible relative to employment dates. Do not interpret the status shares as a measured annual attrition rate. Pivot results can reflect status filters. The dashboard contains employee-level personal data and must be anonymized or replaced with synthetic data before public GitHub release; macros should also be inspected before distribution.

9. Tools and deliverables

Microsoft Excel macro-enabled workbook, pivot-style summaries and dashboard; PDF project documentation; editable Word documentation; README.md. Public repository should contain a sanitized data sample or screenshots only after privacy and rights review.

10. Portfolio description

Developed an Excel-based HR Team Dashboard to analyze 171 employee records across seven departments and joining years 2020–2025. Summarized workforce status, attrition records, transfers, employee grades, employment types and reporting structures using dashboard reporting and pivot-style calculations.
